Generated Interview Questions

Question 1

Explain OOP concepts in Python.

Question 1

Explain OOP concepts in Python.

Your Answer for Question 1

Polymorphism, which enables the same method to perform different actions depending on the object; and Abstraction, which hides unnecessary implementation details and shows only essential features to the user. Python supports OOP through features like constructors (`__init__`), methods, and special functions, making it useful for developing scalable and maintainable applications.

Correct Answer

Question 2

Explain JOINS in SQL.

Your Answer for Question 2

SQL JOINS are used to combine data from two or more tables based on a related column between them. They help retrieve meaningful information stored across different tables. The main types of JOINS are INNER JOIN, LEFT JOIN, RIGHT JOIN, and FULL JOIN. INNER JOIN returns only the matching records from both tables. LEFT JOIN returns all records from the left table and matching

Question 3

Explain inheritance in Java.

Your Answer for Question 3

Inheritance in Java is an Object-Oriented Programming (OOP) concept in which one class acquires the properties and methods of another class. The class that provides the features is called the parent class (superclass), and the class that inherits those features is called the child class (subclass). Inheritance helps in code reusability, reduces duplication, and makes programs easier to
